

Max O. Peer review of Quantum Computing paper

Quality of Outline: 2.5/3 – I thought that this was a very nice outline and gave a good depiction on what the paper is about. This is just an idea but I would put the challenges in its current state right after what quantum computing is. I just think it would be easier to read if right after what quantum computing is you explain the challenges of it and then what companies are doing right now then lastely explain where quantum computing is going.

Intellectual Merit: 2.5/3 – So I think that this is a cool paper idea. I would make sure to explain what quantum computing is and how it works. Also make sure to break down explanations so that the average reader can grasp the concepts. All in all I am excited on what you come up with and good luck on the paper!!

Video: 0/3 – There was no video to review.
